

## Energy Audit

Asheville Friends' Peace and Earth Committee arranged for an energy audit of our Meetinghouse through Interfaith Power and Light, of which we are a member. Eric Soderberg, an "energy engineer" with IPL, explains that Energy Use Index is the amount of total energy (electricity plus natural gas) used per square foot of area per year. The lower the number, the more energy efficient the building is. He says our Meeting is doing very well, at 34.8 kBtu/sq ft/yr, with the average value for churches in the south Atlantic region at 39.6 kBtu/sq ft/yr.
